

Combi Boiler Digital Display Unit

This digital display is designed for combi boilers in HVAC and refrigeration systems. It provides a user interface to monitor and control boiler functions, displaying temperature, pressure, and time.

Overview

Intelligent Combi Boiler Interface

This digital display unit is designed for advanced control of HVAC and heating boiler systems. It features a user-friendly interface with a clear digital screen and mechanical buttons for precise operation. Equipped with intelligent timing modes, real-time clock functionality, and power-off memory, this unit ensures reliable and efficient boiler management.

Technical Features

Intelligent Functions

- Multiple intelligent timing programming modes
- Power off memory function
- Water pressure gauge position integration

Display Interface	Color Digital Screen, Real-time Clock (RTC), Mechanical Buttons
Compatibility	Communication design compatible and interchangeable with power board

Construction

Housing Material

Plastic Case

Monitoring Metrics

Key Monitoring Metrics

0 °C

Temperature Unit

0 bar

Pressure Unit
