

Combination Lathe and Milling Machine

This versatile combination machine tool integrates lathe and milling functions. It features robust construction, precision machining capabilities, and variable speed control for diverse applications.

Product Overview

Versatile Combination Machine

The BVB25-3/BVB-3L is a versatile combination machine tool integrating lathe and milling functions. It features a robust construction, precision machining capabilities, and variable speed control for diverse applications. Suitable for small-scale production, model engineering, and educational purposes, this machine offers a compact footprint and user-friendly operation.

Machine Capabilities

Suitable Applications

- Small-scale production
- Model engineering
- Educational purposes

Type	Combination Lathe and Milling Machine
Key Features	Robust Construction, Precision Machining, Variable Speed Control, Compact Footprint

Identification

Model Number	BVB25-3/BVB-3L
--------------	----------------
