

Combine Harvesters

These combine harvesters are used for efficient harvesting operations. They are suitable for use in fields of ripe grain.

Overview

High-Efficiency Harvesting

These combine harvesters are engineered for large-scale agricultural operations, designed to maximize throughput and crop yield efficiency. Built to handle diverse grain types, they offer robust performance in demanding field conditions. Their advanced harvesting mechanisms ensure minimal grain loss and optimized field coverage, making them an essential asset for professional farming enterprises.

Key Performance Metrics

Operational Efficiency

98 %

Harvesting Efficiency

15 km/h

Field Speed

Technical Specifications

Operational Status

Field Ready • Heavy Duty

Machine Type	Combine Harvester
Suitable Crops	Wheat, Barley, Rice, Corn
