

Combined Refrigeration and Ventilation Unit

This combined refrigeration and ventilation unit is designed for industrial or commercial applications. The system integrates both cooling and air circulation functionalities.

Overview

Integrated Climate Control Solution

This combined refrigeration and ventilation unit offers a streamlined solution for industrial and commercial climate management. Engineered with a robust, enclosed housing, the system ensures durability and weather resistance in demanding environments. By integrating both cooling and air circulation functions into a single, self-contained unit, it provides efficient temperature regulation and air quality maintenance.

Technical Specifications

System Type	Combined Refrigeration and Ventilation
Key Components	External Condenser, Ventilation Duct, Air Intake Filters, Integrated Fan
Construction	Weather-resistant, robust enclosed housing

Key Performance Metrics

Integrated Functions

- Refrigeration
- Ventilation
- Heat Dissipation
