

Combined Rice Milling Machine

This combined rice milling machine offers a comprehensive solution for rice processing. It integrates husking, polishing, and grading functions into a single, efficient unit.

Overview

Comprehensive Rice Processing Solution

The MLNJ15/13 III Combined Rice Milling Machine is a highly integrated solution designed to streamline rice processing operations. By combining husking, polishing, and grading functions into a single, compact unit, it maximizes output while minimizing grain loss. This machine is engineered for small to medium-scale mills, offering adjustable settings to accommodate various rice types and desired whiteness levels.

Key Features

Integrated Functions

- Husking
- Polishing
- Grading

Core Components

Rubber Roller Husker, Whitening Polisher, Grading Sieve

Performance

Operational Advantages

High Efficiency • Minimal Grain Loss • Adjustable Settings • Compact Design

Maintenance & Safety

- Durable construction for long-lasting performance
- Minimal maintenance requirements
- Integrated safety features for operator protection
