

Combined Rice Milling Machine

The combined rice milling machine is engineered for efficient rice processing. It integrates husking, polishing, and grading into a single automated unit suitable for small to medium-scale rice production.

Overview

Efficient Rice Processing Solution

The Combined Rice Milling Machine is a versatile, integrated unit designed for efficient husking, polishing, and grading of rice. Engineered for small to medium-scale operations, this compact system minimizes grain breakage while maximizing yield. Its low-support design makes it an ideal choice for areas with power shortages, as it can be effectively powered by a diesel engine.

Performance

Milling Output Quality

White and bright finish, Low broken rice rate, Minimal chaff powder

Technical Specifications

Power Compatibility

Diesel engine compatible • Low support power requirement

Integrated Functions

- Husking
- Polishing
- Grading

Suitable Scale

Small to medium-scale rice production
