

Commercial Air Curtain Heater

The commercial air curtain heater is designed for installation above doorways to create an invisible barrier of air, preventing heat loss and maintaining comfortable indoor temperatures. It features a high-efficiency heating element and a powerful fan to deliver a consistent and wide airflow.

Product Overview

High-Efficiency Air Curtain Heater

This commercial air curtain heater is engineered for installation above doorways to create an effective, invisible thermal barrier. By preventing heat loss and maintaining consistent indoor temperatures, it helps reduce energy costs while significantly improving comfort for customers and staff. The unit features a robust, durable metal housing and a high-performance heating element, making it an ideal climate control solution for retail stores, restaurants, and high-traffic commercial environments.

Technical Specifications

Installation	Above-doorway mount
Housing Material	Durable metal

Key Features

Key Benefits

- Invisible air barrier technology
- Energy-saving heat loss prevention
- High-efficiency heating element
- Powerful, consistent airflow
- User-friendly control interface

Applications

Best For	Retail Stores, Restaurants, Commercial Spaces, High-Traffic Entrances
