

# Commercial Aircraft

This aircraft is designed for commercial passenger transport. It has twin turbofan engines and a conventional tail configuration.

## Overview

### International Air Transport Solution

This commercial aircraft is designed for efficient international air transport operations. Featuring a narrow-body configuration with twin turbofan engines, it is optimized for reliable performance across various routes. The design includes a conventional tail configuration and is built to meet rigorous operational standards for passenger and cargo transport.

## Technical Specifications

### Operational Capability

International Transport • Commercial Service

Aircraft Configuration	Narrow-body jet airliner
Engine Type	Twin turbofan

## Design Features

### Key Design Elements

- Under-wing engine mounting
- Conventional tail configuration
- Retractable landing gear
