

Commercial Ice Block Production Machine

This ice block machine is a refrigeration system designed for producing ice blocks. It is engineered for reliable and consistent ice production in commercial or industrial settings.

Overview

High-Efficiency Ice Block Production

This commercial ice block machine is engineered for rapid, energy-efficient ice production, utilizing advanced cooling technology and energy economizers. Designed for ease of use, the system features automated computer control for fault detection and consistent performance. Delivered pre-tested, this unit requires minimal installation, allowing for quick integration into your existing operational workflow.

Technical Specifications

Compressor Brands	Copeland, SANYO, Bitzer
Refrigeration Components	Danfoss
Electrical Components	LG

Operational Features

Key Operational Benefits

- Fast ice making and dropping cycles
- Energy-saving operation
- Computerized system monitoring
- Automated, user-friendly controls
- Reduced fault frequency

Installation Requirements

Pre-tested • Plug-and-play ready • Requires water and power connection
