

Commercial Refrigeration and Ventilation System

This high-performance system is designed for efficient cooling and air circulation. It is ideal for commercial and industrial applications requiring reliable temperature control and air quality management.

Product Overview

Professional Climate Control

This high-performance refrigeration and ventilation system is engineered for industrial and commercial environments. The solution includes a precision indoor unit with adjustable airflow louvers and a high-capacity outdoor unit with dual-fan heat exchange technology. Designed for reliability, it ensures consistent temperature control and superior air quality management for demanding professional spaces.

Technical Specifications

Application	Commercial, Industrial
Cooling Design	High-efficiency heat exchange
Airflow Control	Adjustable indoor louvers
Outdoor Fan Configuration	2 units

Features

System Highlights

- Optimized air distribution
- Enhanced heat exchange capability
- Reliable temperature management
- Advanced ventilation integration
