

# Commercial Refrigeration and Ventilation Unit

This commercial refrigeration and ventilation unit is designed for industrial or large-scale cooling purposes. The unit features a dual-module design with separate fan units for heat dissipation.

## Product Overview

### Industrial Cooling Performance

This high-capacity commercial refrigeration and ventilation unit is engineered for demanding cooling applications in industrial environments. Featuring a robust dual-module architecture, it ensures efficient heat dissipation through specialized top-mounted fan systems. The durable, weather-resistant construction makes it an ideal solution for consistent outdoor installation and heavy-duty usage.

## Technical Specifications

### Cooling Components

- Dual top-mounted dissipation fans
- Large-format front air intake grilles

### Installation Type

Outdoor • Industrial • Commercial

### System Design

Dual-module configuration

### Build Quality

Weather-resistant, Industrial-grade, Outdoor-ready
