

# Commercial Reverse Osmosis Water Filtration System

This commercial RO system is designed for office and public use, providing purified water. It features multiple stages of filtration to remove impurities and contaminants, ensuring a consistent supply of clean drinking water.

## Product Overview

### High-Efficiency Commercial Filtration

This commercial Reverse Osmosis system is engineered to provide a consistent supply of purified water for office and public environments. Featuring a robust multi-stage filtration process, it effectively removes impurities and dissolved solids to ensure high-quality drinking water. Designed for high-demand settings, the system combines reliable performance with flexible power and capacity options.

## Performance Metrics

### Daily Capacity

**100 GPD**

Capacity

**150 GPD**

Capacity

**200 GPD**

Capacity

**300 GPD**

Capacity

## Operating Conditions

### Suitable Water Source

Municipal Water

### Feed Water Pressure

0.1~0.35Mpa

### Feed Water Temperature

5 ~38

## Technical Specifications

### Filter Size

20 inch

### Storage Tank Capacity

11 Gallons

### Power Supply

110V, 220V
