

# Commercial Reverse Osmosis Water Purification System

This commercial reverse osmosis (RO) system is designed for office and public use, providing high-quality purified water. It features multi-stage filtration to remove sediment, chlorine, and dissolved solids.

## Overview

### Commercial Reverse Osmosis System

This commercial reverse osmosis (RO) system is designed for office and public environments, providing a reliable source of high-quality purified water. It features a multi-stage filtration process, including pre-filtration, RO membrane filtration, and post-filtration, effectively removing sediment, chlorine, and dissolved solids. The unit is housed in a convenient, mobile cabinet design that ensures both aesthetic appeal and protection for the internal components.

## Design & Installation

### Design Features

- Cabinet on wheels for flexible installation
- Safety-focused construction
- Leakage prevention design
- Electric shock prevention measures

## System Control & Monitoring

### System Monitoring

**1 Status**

Flow Meter

**1 Status**

TDS Indicator

**1 Status**

Pressure Gauge

### Automation

Fully Automatic
