

Communication Equipment Antenna

This antenna is designed for use in communication products, specifically within the antenna and receivers category. Constructed from a blue material, it's suitable for electronic applications requiring signal transmission or reception.

Overview

Professional Communication Antenna

This high-performance antenna is engineered specifically for communication equipment and receiver applications. Featuring a distinct dome-shaped top and a robust cylindrical design, it is built to ensure reliable signal transmission and reception. Its durable construction makes it a versatile solution for various electronic systems requiring consistent connectivity.

Physical Characteristics

Color

Blue

Design Shape

Dome-top cylindrical

Application

Primary Application

Signal Transmission, Signal Reception, Electronic Equipment

Category

Antenna and Receivers
