

# Communication Modem Module

These modem modules are used for signal demodulation and processing in communication systems. The modules feature metal housings, multiple pins for electrical connections, and coaxial connectors for signal input/output.

## Product Overview

### Professional Communication Modem Modules

These communication modem modules are designed for robust signal demodulation and processing in industrial communication systems. Each unit features a durable metal housing, multiple pin configurations for secure electrical integration, and coaxial connectors for reliable signal input and output. These modules are built for seamless integration into electronic devices requiring dedicated modem functionality.

## Technical Specifications

### Available Model Variants

Model Number	Production Code
MBM-13	200506141
MBM-03	200506012
MBM-13	200506021
MBM-07	200506016
MBM-15	200506021

### Construction Features

Metal Housing, Coaxial Connectors, Pin-Header Interface

### Intended Application

Signal demodulation and processing in communication systems
