

Compact Asphalt Paver

This asphalt paver is a compact and versatile machine designed for paving roads, highways, and other surfaces. It features advanced control systems for precise paving and smooth surface finishes.

Overview

Professional Asphalt Paving Solution

This versatile asphalt paver is engineered for high-performance road construction, highway surfacing, and urban paving projects. Designed for efficiency and precision, the machine features a hydraulically extendable screed and a high-capacity hopper to ensure continuous, smooth material flow. With advanced control systems and robust power transmission, it delivers consistent surface finishes even in confined spaces.

Technical Specifications

Engine Power

165 kW

Rated Power

Control Systems

- Micro computer constant speed auto control
- Ultrasonic non-contact balance oar
- Imported ultrasonic material level controller

Paving Width

3 - 12.5m

Drive System

Full Hydraulic, Two-Side Independent Drive

Components & Build

Screed & Compaction

- Electric heating DTV iron slab
- Double Tamper
- Eccentric vibration

Maintenance & Reliability

- Centralized lubricating system
- Wearable steel plate
- Strong power water-cooling system
