Product Overview

Efficient & Compact Kitchen Water Heating

This compact electric water heater is specifically designed for kitchen environments, offering a high-impact resistant body for long-term durability. It features a versatile design suitable for both under-sink and above-sink installations, ensuring hot water is available where space is limited. With multiple color options for the outer shell and service panel, it integrates seamlessly into modern professional or residential interiors.

Tank Construction

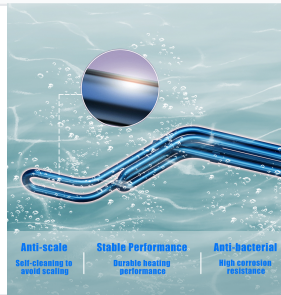

The exclusive single weld line design uses thickened SPCC material to reduce leakage risk by over 67% compared to standard tanks.

Blue Diamond Single Weld Design

The inner tank is constructed from customized thickened SPCC material featuring an exclusive single weld line design. This engineering approach reduces weld jointing by 50% and weld length by 25% compared to triple-weld tanks, significantly decreasing the risk of leakage and making it suitable for high-pressure and high-rise applications.

Heating Element

Advanced heating element featuring anti-scale and anti-bacterial properties for stable performance and high corrosion resistance.
