

Compact Enclosed Three-Wheeled Urban Vehicle

This compact, enclosed three-wheeled vehicle is designed for urban transportation. It features a fully enclosed cabin with windows, providing weather protection for the driver and passengers.

Overview

Compact Urban Mobility

The Tricar-4 is a sophisticated three-wheeled vehicle engineered specifically for the challenges of modern urban environments. Its fully enclosed cabin provides essential weather protection, while the ergonomic layout ensures high maneuverability in congested city streets. This vehicle represents a practical and economical solution for short-distance personal transportation, combining safety features with durable construction.
