

Compact Gasoline Engine for Power Equipment

This compact gasoline engine is designed for small power equipment applications. It is a two-stroke model featuring a red engine block, black air filter housing, and translucent white fuel tank.

Product Overview

Compact Power Solution

This compact gasoline engine is engineered for lightweight and portable power applications, making it an ideal choice for small power equipment. Featuring a two-stroke design with an integrated cooling system, it offers reliable performance for tools such as trimmers and brush cutters. The unit includes a carburetor and manual starter mechanism, ensuring ease of operation in field conditions.

Technical Specifications

Engine Type

2-Stroke • Gasoline

Key Features

- Manual starter mechanism
- Integrated cooling fins
- Translucent fuel tank for level visibility
- Compact design for portability

Model Identifier

FE 340

Applications

Trimmers, Brush cutters, Portable power equipment
