

Compact Gasoline Engine

This is a compact gasoline engine suitable for generators and water pumps. It features a single-cylinder, four-stroke design with a red fuel tank and metallic silver engine block.

Product Overview

Versatile Compact Gasoline Engine

This compact, single-cylinder four-stroke gasoline engine is designed as a portable power solution for a variety of equipment. With its robust metallic silver block and integrated cooling fins, it offers efficient performance for applications such as generators, water pumps, and small mobile machinery. The engine is engineered for portability and reliability, making it an ideal choice for professional-grade field equipment.

Technical Details

Primary Components

- Fuel tank with filler cap
- Air filter assembly
- Metallic engine block with cooling fins
- Output shaft

Engine Configuration	Single-cylinder, four-stroke
Key Design Features	Air-cooled, Compact, Portable, Integrated Fuel Tank
