

Compact Hydraulic Excavator

This compact excavator is a versatile construction machine for digging and trenching. It features a hydraulic system, rotating cab, and compact design for easy operation in urban environments.

Overview

Compact Hydraulic Excavator

This compact hydraulic excavator is designed for high efficiency and reliability in confined spaces. Featuring a powerful engine with low fuel consumption and an imported hydraulic system, it offers superior stability and performance for various construction and utility tasks. The machine includes versatile options like adjustable chassis width and interchangeable tracks, making it a flexible solution for urban environments.

Performance & Engine

Engine Performance	High-reliability engine with optimized fuel consumption
Hydraulic System	Original imported world-brand hydraulic system for enhanced stability and efficiency

Design & Maneuverability

Maneuverability

- Zero radius of gyration
- Adjustable chassis and dozer width
- Independent slewing and swing operation
- Slewing priority function

Chassis & Track Options	Rubber track, Steel track, Interchangeable tracks
-------------------------	---

Safety & Maintenance

Safety Systems

Boom safety valve • Fall prevention

Maintenance Accessibility	Turnover canopy and cabin with fully open platform for easy repair
---------------------------	--

Configuration

Cab Configuration

- Canopy
- Cabin
