

# Compact Hydraulic Excavator

This compact hydraulic excavator is designed for digging, trenching, and material handling in construction and landscaping. It features a zero tail swing for operation in confined spaces and a variable displacement pump for efficient hydraulic power.

## Product Overview

### Compact Hydraulic Excavator

This compact hydraulic excavator is engineered for precision digging, trenching, and material handling across construction, landscaping, and utility sectors. Featuring a zero tail swing design, it excels in confined workspaces where maneuverability is critical. The unit is equipped with a variable displacement pump to ensure efficient hydraulic power delivery, paired with an intuitive operator station designed for comfort and ease of use.

## Key Performance Metrics

### Performance Highlights

**301.8**

Model Designation

## Design & Capability

### Design Features

Zero Tail Swing, Variable Displacement Pump, Compact Design

## Applications

### Suitable Applications

- Site Preparation
- Demolition
- General Excavation
- Landscaping
- Utility Work
