Overview

Compact Maize Milling Solution

This complete maize processing line is engineered for small to medium-scale operations, offering a streamlined solution for cleaning, conditioning, degermination, and grinding. Designed specifically to produce high-quality fine maize flour, the system integrates multiple processing stages into a compact footprint. The durable construction features wear-resistant components, ensuring long-term reliability and consistent output for your facility.

Process Capabilities

Processing Stages

- Cleaning
- Conditioning
- Degermination
- Grinding

Primary Output

Fine maize flour

Design Features

Design Highlights

Compact footprint, Combined cleaning unit, Wear-resistant sieve plates, Integrated control panel

Compliance & Quality

Certifications

SGS • ISO 9001
