

Compact Pressure Tank 0.4/2L

This pressure tank maintains consistent pressure in closed water systems. Its compact size allows for installation in confined spaces.

Product Overview

Compact Pressure Solution

The Compact Pressure Tank 0.4/2L is engineered to maintain consistent pressure within closed water systems, effectively reducing pump cycling and preventing water hammer. Its robust construction ensures long-term durability, while the compact design facilitates installation in tight or confined spaces. This pre-pressurized unit is ready for immediate integration into domestic, heating, or industrial plumbing setups.

Technical Specifications

Total Capacity

0.4 L

Minimum Capacity

2 L

Maximum Capacity

Installation Features

- Pre-pressurized
- Threaded connection
- Compact form factor
- Easy system integration

Material Composition

Steel, Painted Finish

Application Suitability

Compatible Applications

Domestic Water Systems • Heating Systems • Industrial Processes
