

Compact PTC Space Heater

This compact heater is designed for space heating applications. It uses PTC (Positive Temperature Coefficient) technology for efficient and self-regulating heating.

Product Overview

Compact PTC Space Heater

The Compact PTC Space Heater utilizes advanced Positive Temperature Coefficient heating technology to provide efficient, self-regulating thermal output. Designed with a rectangular form factor, this unit is engineered for space-saving integration in various environments. The inclusion of an integrated control panel and remote operation capability ensures convenient management of climate comfort for professional users.

Design and Interface

Form Factor	Rectangular
Control Method	Control Panel, Remote Control

Technology Features

Heating Technology

PTC (Positive Temperature Coefficient) • Self-Regulating
