

Compact Reflex Sight

The compact reflex sight is a non-magnifying optic designed for rapid target acquisition and enhanced situational awareness. Its wide field of view and illuminated reticle facilitate quick and accurate aiming in various lighting conditions.

Overview

Compact Reflex Sight Overview

The Compact Reflex Sight is a non-magnifying optic engineered for rapid target acquisition and enhanced situational awareness. Designed with a wide field of view and an illuminated reticle, it ensures quick and accurate aiming across various lighting conditions. Its durable construction is built to withstand significant recoil and harsh environmental factors, making it a reliable choice for tactical, sport shooting, and hunting applications.

Performance

Magnification	Non-magnifying
Aiming Features	Illuminated Reticle, Wide Field of View, Adjustable Brightness

Design & Compatibility

Compatible Platforms

- Rifles
- Shotguns
- Pistols

Suitable Applications

Tactical • Sport Shooting • Hunting

Design	Low-profile
