

Compact Rice Combine Harvester

This compact combine harvester is designed for efficient rice harvesting. It features a cutting mechanism, threshing unit, and cleaning system to effectively separate grain from straw and chaff.

Product Overview

Compact Multi-Functional Harvester

This compact combine harvester is designed to efficiently harvest both rice and wheat crops. Its multi-functional design allows for seamless threshing and impurity removal directly in the field. Specifically engineered for challenging terrains like hills and mountains, it provides a practical solution for areas inaccessible to large-scale machinery.

Key Features

Operational Benefits

- Multi-functional harvesting and threshing
- Optimized for hills and mountain terrains
- Compact and lightweight design
- Simple operator interface
- Cost-effective solution for small to medium farms

Technical Capabilities

System Functions

- Harvesting
- Threshing
- Impurity separation

Suitable Crops	Rice, Wheat
Mobility System	Tracks for paddy fields
