

Compact Rice Husker for Grain Processing

This compact rice husker is engineered for efficient grain processing. It effectively separates the husk from rice grains, leading to an improved final product.

Product Overview

Efficient Grain Processing

This compact rice husker is engineered for small to medium-scale agricultural operations, providing an efficient solution for separating husks from rice grains. Its robust construction ensures durability, while the streamlined design simplifies both operation and maintenance. By effectively removing husks, this machine significantly improves the quality of the final processed rice product.

Technical Specifications

Key Features

- Integrated feeding hopper
- Robust husking mechanism
- Dual outlets (husked rice and separated husks)
- Easy-maintenance design

Design Type	Compact Rice Husker
Suitable For	Small-scale farming, Medium-scale operations, Grain processing
