

Compact Soil and Asphalt Roller

This compact roller is designed for compacting soil and asphalt. It features a durable steel drum and user-friendly controls.

Overview

Compact Performance

This compact roller is engineered for efficient soil and asphalt compaction in small to medium-sized construction and landscaping projects. It combines a robust engine with a durable steel drum to deliver consistent compaction force while maintaining excellent maneuverability. Designed for ease of use, the unit features intuitive controls that help operators maximize productivity on the job site.

Features

Design Advantages

- Robust engine for reliable performance
- Durable steel drum construction
- User-friendly control interface
- High maneuverability for tight spaces

Ideal Applications

Soil Compaction, Asphalt Compaction, Landscaping, Small Construction
