

Compact Spinning Device for Textile Manufacturing

This compact spinning device is engineered for textile manufacturing. It facilitates the production of high-quality yarn through modification with consumptive and damageable parts.

Product Overview

High-Efficiency Yarn Production

These compact spinning devices are engineered for precision and durability in high-demand textile manufacturing environments. Designed for seamless modification, they support both LyangLee and JeLee series configurations to suit diverse production needs. The system ensures long-term operational reliability by providing easily accessible consumptive and damageable parts.

Technical Features

Maintenance and Parts

- Consumptive parts support
- Damageable parts replacement
- Long-term component availability

Available Configurations

LyangLee Serial, JeLee Serial

Customization Options

Yes
