

Compact Tracked Combine Harvester

This compact combine harvester is designed for efficient harvesting. It features a tracked undercarriage for maneuverability and an internal threshing system for grain separation.

Product Overview

SF130 Compact Tracked Combine Harvester

The SF130 Reaper Series is a specialized agricultural machine designed for high-efficiency harvesting across diverse field conditions. Its compact design is complemented by a robust tracked undercarriage, providing superior maneuverability and stable operation. Built for reliability, it features an advanced integrated threshing system and a convenient discharge mechanism, making it a dependable asset for modern farming operations.

Technical Specifications

Article Number	SF130
----------------	-------

Operational Features

Operational Functions

- Precise crop cutting and gathering
- Efficient grain and straw separation
- Temporary grain storage in integrated tank
- Controlled grain discharge system

Performance Highlights	Tracked Undercarriage, Rotating Cutting Reel, Internal Threshing System, Grain Tank Storage, Ergonomic Cabin
