

Compact Water Purification System

This compact water purification system is designed for softening and filtering water. It features a multi-stage filtration process with a visible transparent water reservoir, making it suitable for home or small office use.

Product Overview

Compact Water Purification & Softening Solution

This high-efficiency purification system is engineered for both home and small office environments. By utilizing a sophisticated multi-stage filtration process, it effectively softens water while removing impurities, ensuring optimal quality for drinking and culinary purposes. Its compact design features a transparent reservoir, allowing for easy monitoring of water levels and system performance.

Technical Specifications

Model Number	QSR-40-02
Rated Total Purified Water Capacity	500 L

Features

Design Features

- Compact footprint for space-saving installation
- Transparent reservoir for visual monitoring
- Ideal for home and small office use

Primary Functions	Water Softening, Multi-stage Filtration
