Product Overview

Industrial Maize Flour Processing Solution

This complete maize processing line is engineered for high-efficiency production of coarse maize flour. The system integrates a comprehensive workflow including cleaning, conditioning, degermination, grinding, and automatic packing. Designed for industrial-scale operations, it emphasizes high yield, consistency, and minimal waste through advanced pneumatic conveying and precision milling technology.

Processing Capabilities

Operational Stages

- Cleaning
- Conditioning
- Degermination
- Grinding
- Automatic Packing

Key Technical Advantages

Advanced Destoning, Wear-Resistant Degermination, Embryo Reduction, Pneumatic Conveying

Technical Specifications

Compliance Standards

SGS Certified • ISO 9001

Design Features

Feature	Benefit
Advanced Destone Design	Reduces stones and light impurities in raw maize
Wear-Resistant Sieve Plate	Ensures long service life for degerminator
Specialized Aspirator	Significantly reduces embryo content in final flour
