

Component Cooling Fan and Heatsink Set

This set includes a cooling fan and heatsink designed to dissipate heat efficiently. It helps maintain optimal operating temperatures for electronic components.

Product Overview

High-Efficiency Cooling Solution

This component cooling fan and heatsink set is engineered to provide reliable thermal management for sensitive electronic components. Designed for optimal airflow and heat dissipation, this assembly helps maintain stable operating temperatures, extending the lifespan of your critical hardware. The set includes essential components for easy integration into existing systems.

Technical Specifications

Model Identifiers	A319, A157, CWJ903, A314
Component Type	Cooling Fan and Heatsink Set
