

Composite Decking Board for Outdoor Use

This composite decking board is durable and requires little maintenance, making it ideal for outdoor use. Its blend of wood fibers and recycled plastic provides resistance to rot, decay, and insect damage.

Product Overview

Durable Composite Decking Solution

This composite decking board is engineered for high-performance outdoor applications, blending wood fibers with recycled plastic for superior longevity. Designed to resist rot, decay, and insect damage, it offers a low-maintenance alternative to traditional timber. The hollow core structure ensures a lightweight yet strong profile, while the grooved surface finish provides enhanced traction for safety in outdoor living spaces.

Technical Specifications

Surface Finish

Grooved • Enhanced Traction

Core Construction

Hollow Core

Material Composition

Wood Fibers, Recycled Plastic

Performance & Durability

Resistance Features

- Rot Resistant
- Decay Resistant
- Insect Damage Resistant

Maintenance

Low-maintenance

Applications

Suitable Applications

- Decks
- Patios
- Outdoor Living Spaces
