

Composite Pin Insulator Metal End Fitting

Metal end fittings designed for use with composite pin insulators. These fittings provide a secure connection point for insulators in electrical applications.

Product Overview

High-Performance Metal End Fittings

These metal end fittings are specifically engineered for use with composite pin insulators, providing a secure and reliable connection point for critical electrical infrastructure. Constructed from durable metal, they offer exceptional mechanical strength and resistance to corrosion, ensuring longevity in demanding environments. Precision-engineered for proper alignment and electrical conductivity, these fittings are suitable for high-voltage power transmission and distribution systems.

Technical Specifications

Material Features

Corrosion Resistant • High Mechanical Strength • Conductive

Application

Power Transmission, Power Distribution, High-Voltage Systems

Environmental Suitability

Harsh environmental conditions
