

Comprehensive Security Solution for Critical Infrastructure

This security solution offers comprehensive protection for critical infrastructure. It includes perimeter protection, sound wave dispersal with searchlight linkage, and entrance/exit security.

Product Overview

Comprehensive Infrastructure Security

This security solution provides an all-round, multi-category, and multi-means perception system designed for critical infrastructure. It performs intelligent comprehensive analysis across information sources to secure important perimeters, entrances, and exits. The system enables proactive prevention and control through highly integrated monitoring and linkage capabilities.

System Capabilities

Key Functional Modules

- Perimeter protection
- Sound wave dispersal with searchlight linkage
- Crossing interception and car detection
- Electronic sentry systems
- Entrance and exit security
- Perimeter linkage with bolt and ball machine
- Comprehensive accusation platform
- Control center integration

Deployment Areas

Perimeter Security, Access Control, Critical Infrastructure, Surveillance
