

Compressed Air Dryer for Pneumatic Systems

This air dryer removes moisture from compressed air systems. It prevents corrosion, extends the life of pneumatic equipment, and ensures consistent performance of air-powered tools.

Overview

High-Efficiency Moisture Removal

These compressed air dryers are engineered to effectively remove moisture from pneumatic systems, preventing internal corrosion and extending the operational lifespan of your air-powered tools. By ensuring consistent, dry air delivery, these units maintain the performance of your pneumatic equipment under demanding conditions. The system includes integrated monitoring features, such as pressure gauges and indicator lights, to provide real-time status updates and ensure optimal operation.

Technical Specifications

Available Models

- CK-1.0A
- CK-7.5A
- CK-28A

Monitoring Features

Integrated Pressure Gauge, Status Indicator Lights

Benefits

Key Advantages

Prevents Corrosion • Extends Equipment Life • Ensures Consistent Performance
