

Compressed Air Filter

This compressed air filter removes contaminants from compressed air systems, such as oil, water, and particulate matter. The filters ensure clean and dry compressed air for pneumatic tools, improving performance and extending service life.

Product Overview

Professional Grade Compressed Air Filtration

These high-efficiency compressed air filters are engineered to remove critical contaminants including oil, water, and particulate matter. By ensuring a clean and dry air supply, these filters protect your pneumatic tools and sensitive equipment from premature wear. Designed for industrial reliability, the system features robust housings and easily replaceable filter elements to minimize maintenance downtime.

Technical Specifications

Design & Maintenance

- Robust housing construction
- Replaceable filter elements
- Wide range of size configurations
- Variable flow rate compatibility

System Suitability

Pneumatic Tools • Industrial Equipment • Process Air

Contaminants Removed

Oil, Water, Particulate Matter
