

Compressed Air Filters and Purifiers

These compressed air filters and purifiers remove contaminants from compressed air systems. They ensure clean, dry air for critical applications, improving the performance of pneumatic equipment.

Product Overview

High-Efficiency Filtration System

These compressed air filters and purifiers are engineered to provide superior protection for pneumatic systems by effectively removing water, oil, and particulate contaminants. Designed for durability, the units ensure the delivery of clean, dry air to extend the service life of critical equipment and optimize process efficiency. The product line offers flexible configurations to meet varying industrial flow requirements.

Technical Performance

Operating Pressure

0 MPa

Minimum Pressure

1.6 MPa

Maximum Pressure

Drainage Method

Auto Drain

Compatible Model Kit

GAS-KIT

Key Features

Core Benefits

- Ensures clean and dry air output
- Protects pneumatic equipment components
- Enhances overall process performance
- Durable construction for long-term use

Contaminants Removed

Water, Oil, Particulate Matter
