

Compressed Air Line Oil-Water Separator

This oil-water separator is used with air compressors to remove dust, water, and oil. It enhances the performance and extends the lifespan of pneumatic tools.

Product Overview

High-Efficiency Compressed Air Filtration

This industrial-grade oil-water separator is engineered to provide clean, dry compressed air by effectively removing dust, water, and oil mist from your pneumatic lines. Its robust steel construction ensures durability in demanding environments, while the multi-stage filtration system optimizes performance without significant pressure loss. Designed for versatility, it is an essential component for automotive shops, manufacturing facilities, and any operation relying on high-quality compressed air for equipment longevity.

Technical Specifications

Maintenance Features

- Manual drain valve
- Pressure gauge for monitoring

Filtration Capabilities

Dust Removal, Water Separation, Oil Mist Removal

Construction Material

Robust Steel

Applications

Suitable Environments

Automotive Shops • Manufacturing Facilities • Pneumatic Equipment Systems
