

Compressed Wood Pallet Press Machine

The pallet press machine is suitable for both standalone operation and integration into multi-unit production lines. It is engineered to produce compressed wood pallets for various industrial applications.

Product Overview

Compressed Wood Pallet Press Machine

This compressed wood pallet press machine is designed for efficient, large-scale manufacturing of industrial pallets. It utilizes a streamlined production process involving crushing, drying, gluing, and high-pressure molding to transform raw wood materials into durable pallets. The system is flexible, allowing for single-unit operation or multi-set configurations to scale production capacity according to factory requirements.

Production Capacity

Daily Output	144 pieces
Monthly Output	4320 pieces
Annual Output (per set)	51840 pieces

Facility Requirements

Required Factory Area	300 sqm
Material Storage Area	1500 sqm

Manufacturing Process

Production Workflow

- Raw material crushing
- Material drying
- Adding glue
- Mixing
- Pressing
- Storage

System Compatibility

Operational Modes	Single unit operation, Multi-set combined operation
