

Compressor Cooled Water Dispenser

This water dispenser uses compressor cooling technology to efficiently dispense cold water. It features separate hot and cold water taps and a durable, user-friendly design.

Product Overview

Reliable Compressor Cooling

The YLRS-B12 is a classic standing water dispenser designed for high-performance cooling and heating. Featuring a robust compressor cooling system, it ensures efficient water temperature regulation while maintaining low noise levels. Built with food-grade materials and a durable stainless steel inner vessel, this unit is an ideal solution for offices and homes requiring consistent access to hot and cold water.
