

Compressor Cylinder Liners for Refrigeration and Ventilation

Cylinder liners designed for refrigeration and ventilation compressors. They are precision-engineered to withstand high pressures and temperatures, ensuring efficient operation and extended lifespan.

Product Overview

High-Performance Compressor Cylinder Liners

These precision-engineered cylinder liners are designed specifically for demanding refrigeration and ventilation compressor applications. Built to withstand extreme pressure and temperature conditions, they ensure consistent operational efficiency and contribute to an extended service life for your equipment. Our liners are available in a diverse range of sizes and material compositions to accommodate various industrial requirements.

Technical Specifications

Operational Capabilities

1 High

Pressure Resistance

1 High

Temperature Resilience

Material Options

- Standard industrial-grade alloys
- High-durability precision engineering materials

Application Compatibility

Refrigeration Compressors, Ventilation Compressors
