

Computer Mouse

The computer mouse is a pointing device that allows users to interact with a computer. It translates hand movements into corresponding on-screen actions for navigation and control.

Product Overview

High-Performance Ribbon Cables

These flat ribbon cables are engineered for efficient internal wiring and complex interconnect applications within electronic devices. Designed for maximum flexibility and space optimization, they offer a superior alternative to traditional round cabling in tight enclosures. The cables feature precisely exposed conductors at the ends, ensuring reliable and straightforward termination for assembly processes.

Technical Specifications

Design Advantages

- High flexibility
- Space-saving profile
- Easy termination

Cable Type	Flat Ribbon Cable
Primary Application	Internal Wiring, Interconnect, Electronic Devices
