

# Computer Web Camera

This PC camera is designed for computer peripheral integration, specifically for web camera applications. It incorporates a lens and housing, suitable for integration into electronic information product systems.

## Product Overview

### Compact Imaging Solution

This compact PC camera is engineered for seamless integration into electronic information systems and peripheral setups. Designed with a robust housing and precision lens, it provides reliable visual capture capabilities for specialized applications. Its small form factor ensures it fits easily into diverse hardware configurations, making it an ideal component for system integrators.

## Technical Details

### Design Features

- Compact housing
- Integrated lens system
- Optimized for system integration

<b>Model Identifier</b>	0538
<b>Primary Application</b>	Computer Peripheral, Electronic Integration, Automotive Imaging
