

Computerized Wire and Cable Cutting Stripping Machine

This computerized machine is designed for precise and efficient processing of wires and cables. The machine automates the cutting and stripping process, ensuring consistent results and increasing productivity.

Product Overview

High-Precision Wire Processing

The ZDBX-16 is a professional computerized cutting and stripping machine engineered for precision and high-efficiency wire preparation. It automates complex stripping and cutting tasks, ensuring consistent quality across various wire types and sizes. Designed for versatility, it is an essential tool for automotive wiring, electronics assembly, and general industrial cable processing.

Technical Capabilities

Key Processing Features

- Computerized automated operation
- Adjustable stripping length settings
- Adjustable wire size capacity
- Integrated safety mechanisms

Operation Status

Automated • Computerized Control

Application Areas

Suitable Industries

Electronics Manufacturing, Automotive Wiring, Industrial Cable Processing
