

Concealed Duct Air Conditioner

This duct air conditioner is designed for concealed installation within ceiling or wall cavities. It is suitable for commercial and industrial environments requiring efficient and discreet climate control via ductwork.

Overview

Concealed Duct Air Conditioner

This concealed duct air conditioner is engineered for seamless integration into ceiling or wall cavities, providing efficient climate control without compromising interior aesthetics. Designed for commercial and industrial environments, the unit features a robust rectangular housing with dual centrifugal fans to ensure powerful and consistent airflow distribution. It includes an integrated external electrical control box and dedicated refrigerant connections, making it a reliable solution for professional HVAC system installations.

Technical Specifications

Suitable Environments

Commercial • Industrial

Installation

Concealed (Ceiling/Wall)

Design Features

Dual Centrifugal Fans, Rectangular Housing, Concealed Design

Components

Core Components

- External Electrical Control Box
- Refrigerant Connections
- Dual Centrifugal Fan Assembly
