

Concrete Aggregate Batching Machine

This batching machine is designed for precise and efficient mixing of concrete aggregates. It features multiple hoppers for different materials, ensuring accurate proportions and consistent, high-quality concrete mixtures.

Product Overview

High-Efficiency Concrete Batching

The QPL1200 is a fully-automatic concrete batching machine engineered for precision and reliability in large-scale construction environments. It utilizes advanced electronic cumulative measurement and PLC centralized control to ensure accurate material proportions and consistent mixing speeds. Designed for versatility, the system is compatible with various feeding methods, including loading machines, belt conveyors, and grab buckets.

Technical Specifications

Automation Level

Fully-Automatic • Digital Display

Control System

PLC Centralized Control

Measurement Method

Electronic cumulative measurement

Compatibility & Integration

Compatible Feeding Equipment

- Loading machine
- Belt conveyor
- Grab bucket
- Horizontal pushing
