Product Overview

Professional Grade Concrete Anchors

This collection features heavy-duty anchor solutions engineered for secure fastening in concrete and masonry environments. Designed for structural integrity, these components offer high pull-out strength and vibration resistance, making them suitable for demanding industrial and construction applications. From machinery anchoring to HVAC and electrical system suspension, these versatile fasteners provide reliable performance in both indoor and outdoor settings.

Technical Specifications

Design Features

- Threaded stud with nut and washer for adjustable tension
- Internally threaded design for easy installation
- Flush, clean appearance after installation
- Corrosion-resistant finish for durability

Material Composition

High-strength steel with corrosion-resistant finish

Available Types

Heavy-duty Anchor Bolt, Drop-in Anchor

Applications

Primary Applications

Structural Supports • Machinery Anchoring • HVAC Equipment • Electrical Fixtures • Plumbing Systems

Installation Environments

Concrete, Masonry, Indoor, Outdoor
